

Energy management system

Jan Vetle Moen

How to achieve energy savings

- use of energy meter data -
- “Energy project” helps to discover and categorise energy saving potential. But:
- Energy management is a process of continuous control and improvement, not a one-off effort!
- Installation of meters gives information and an opportunity to develop a performance measurement system
 - Actions of front-line staff have the biggest impact on energy saving
 - Monitoring and supervision of energy consumption gives feedback to front-line staff

Summary

- Make the organisation aware of the energy consumption
- Make it interesting and entertaining
- Define wider objectives
- Give responsibility to the managers to improve
- Use energy data to visualise, and give reports to the whole organisation from the top management to front-line staff
- Do not be afraid of sharing information in the organisation
